Pelican Box Containing DM

Driver Power Board

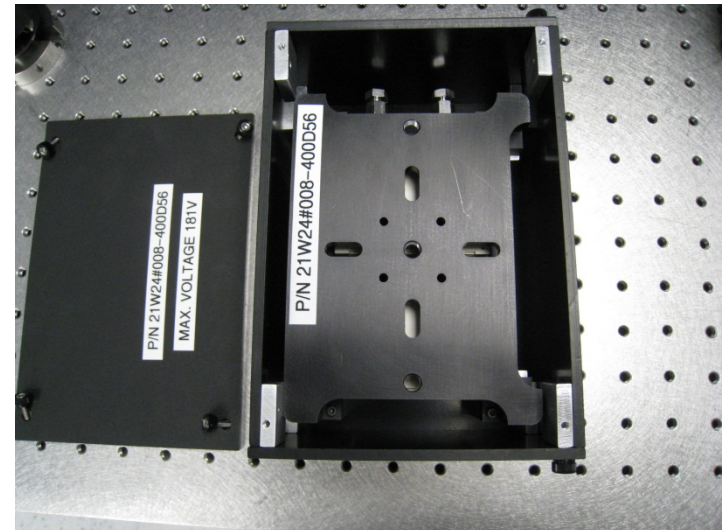

2k Device Carrier

DM Box

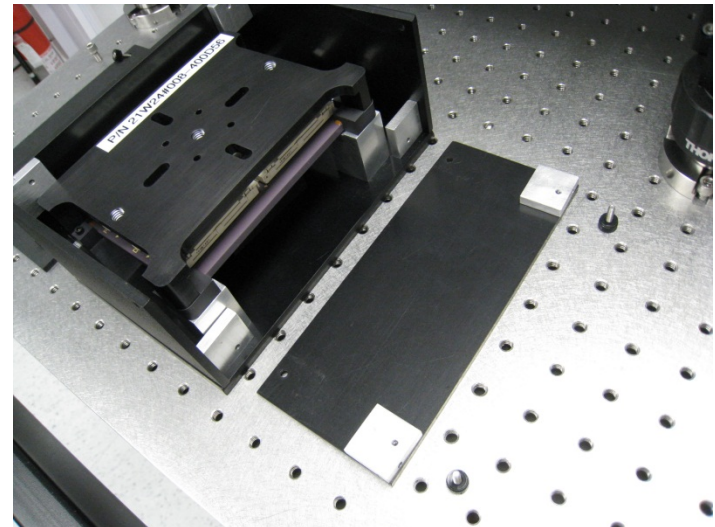

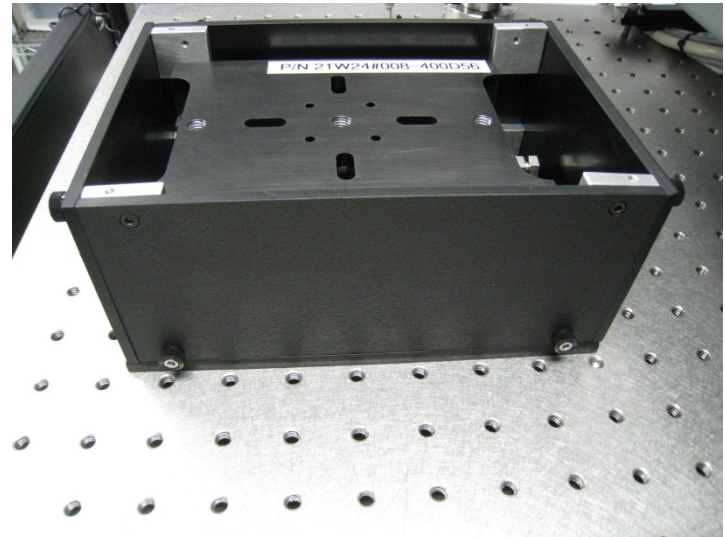

Setup Instruction

- Remove the four thumb screws on the top and remove the lid

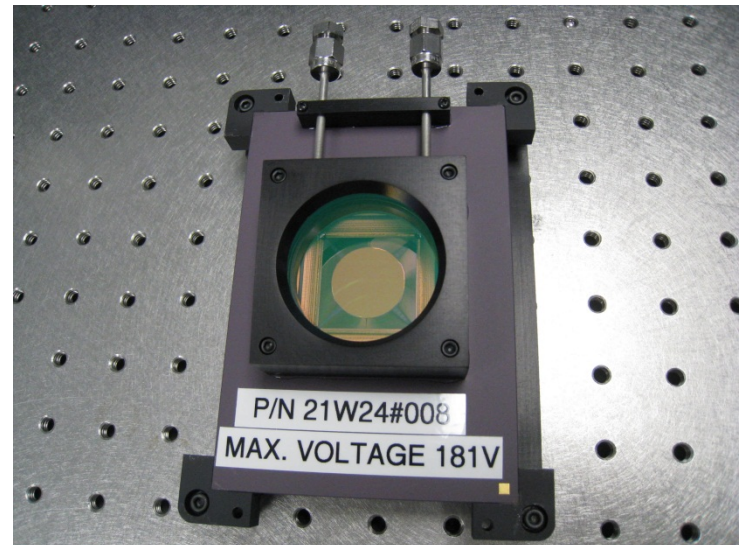

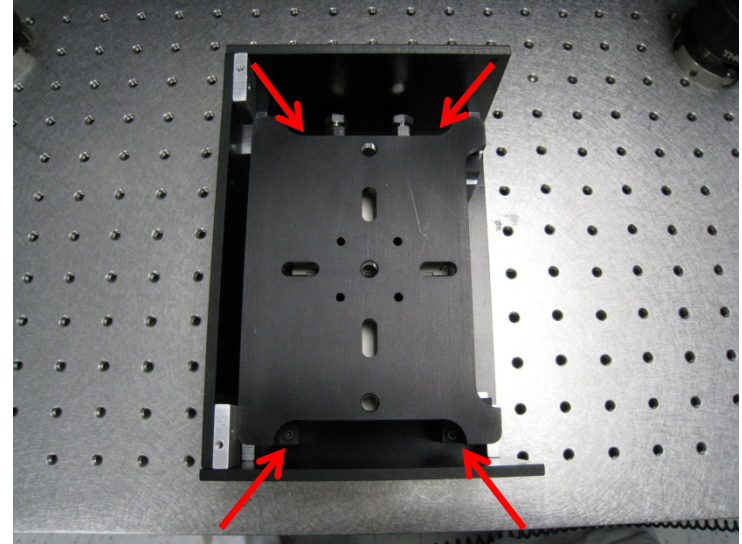

Setup Instruction

- Remove the remaining four thumb screws and slide out the side panel

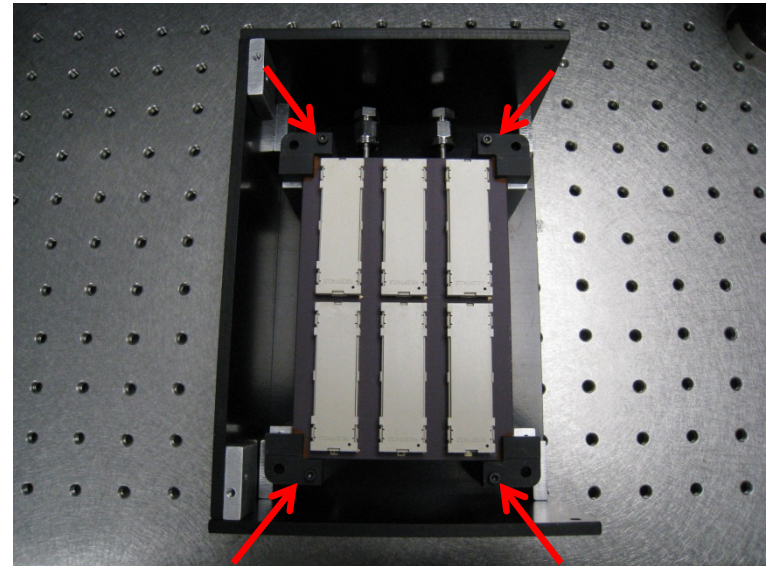

Setup Instruction

- Remove the four 4-40 screws on the inside corners of the DM
- Remove the DM with Mounting plate attached
- Remove the four 6-32 screws from the DM

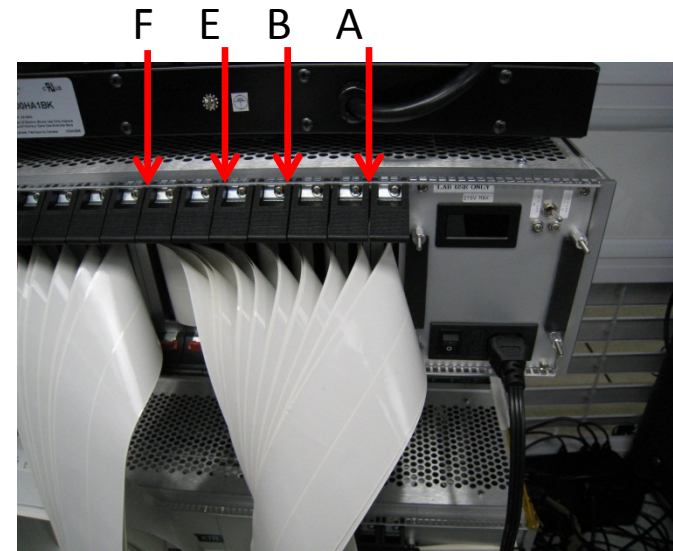

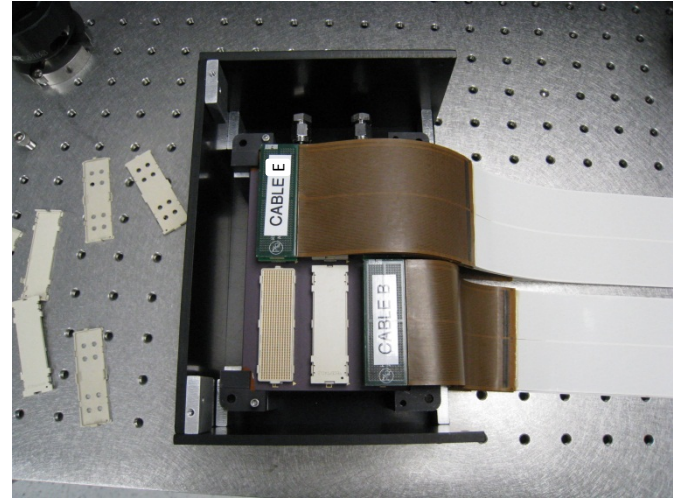

Setup Instruction

- Place the DM back in the shipping box
- Replace the four 4-40 screws

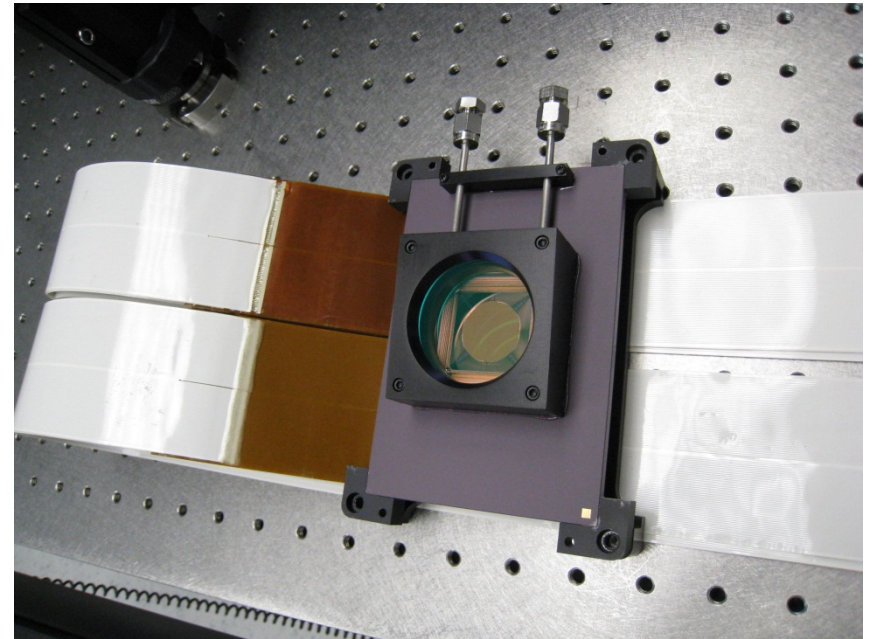

Setup Instruction

- Attach the four meg-array cables
- Make sure to match up the cable designation with the labels on the package
- Do not use the two center cables on the package, C and D

Setup Instruction

- Flip the DM with cables attached back onto the mounting plate
- Replace the four 6-32 screws

Window Assembly

- The window assembly has two steel 1/8" compression fittings for input and output
- The system should have a pressure between 1psi to 1.5psi above atmosphere with very low flow
- Do not exceed 2psi as you may incur more leaking in the assembly
